

Limiting Factor Report

This report contains a list of limiting factors by watershed (HUC5) as generated during multiple processes. These factors have been described as impediments to fish productivity or abundance that occur in the tributary habitat of the species. They pertain to salmon, generally Chinook or Steelhead, that spawn, rear, or migrate through these watersheds. We provide these lists here for Tribal PCSRF project solicitors so that they may use them as needed for project selection and design, and also for documentation of how projects will meet the objectives to remedy limiting factors in their areas. Because limiting factor definitions were not standardized between these different sources, they are provided here as separate lists.

Up to three sources of limiting factors are provided here, although not all basins were assessed for each process:

1) Subbasin Planning: Limiting Factors were identified at CRITFC as they were documented in the 2001/2002 Subbasin Plans. Generally, this information was generated for Ecosystems Diagnosis & Treatment (EDT) or Qualitative Habitat and Analysis (QHA) modeling of subbasin processes, but in many cases the Subbasin Planners edited these lists for publication in the Subbasin Plans according to their knowledge.

2) Tribal Remand Process: During the Tribal response and habitat action proposal process of the BiOp Remand, Tribal biologists identified limiting factors by watershed that affect Chinook and Steelhead habitat. These limiting factors were used to assess the potential benefit for survival improvement if habitat actions occur. These lists of limiting factors are provided here.

3) NOAA Technical Recovery Team: We have been assured that NOAA will generate a standardized set of limited factors for use, probably during the Fall of 2007. When these lists are made available, we will add them here.

Limiting Factors identified during Subbasin Planning by Watershed

HUC4: Lower John (17070204)
Day

Watershed Lower John (1707020401)
(HUC5): Day River-
Kahler Creek

Limiting Factor:

Flow
Habitat Diversity
Key Habitat Quantity
Obstructions
Sediment Load
Water Temperature

Watershed Lower John (1707020402)
(HUC5): Day River-
Service Creek

Limiting Factor:

Flow
Habitat Diversity
Key Habitat Quantity
Obstructions
Sediment Load
Water Temperature

Watershed Bridge Creek (1707020403)
(HUC5):

Limiting Factor:

Flow
Habitat Diversity
Key Habitat Quantity
Obstructions
Sediment Load
Water Temperature

Limiting Factors identified during Subbasin Planning by Watershed

Watershed Lower John (1707020404)
(HUC5): Day River-
Muddy Creek

Limiting Factor:

Flow
Habitat Diversity
Key Habitat Quantity
Obstructions
Sediment Load
Water Temperature

Watershed Lower John (1707020405)
(HUC5): Day River-
Clarno Rapids

Limiting Factor:

Flow
Habitat Diversity
Key Habitat Quantity
Obstructions
Sediment Load
Water Temperature

Watershed Butte Creek (1707020406)
(HUC5):

Limiting Factor:

Habitat Diversity
Key Habitat Quantity
Sediment Load
Water Temperature

Watershed Pine Hollow (1707020407)
(HUC5):

Limiting Factor:

Flow
Habitat Diversity
Key Habitat Quantity
Sediment Load
Water Temperature

Limiting Factors identified during Subbasin Planning by Watershed

Watershed Thirtymile (1707020408)
(HUC5): Creek

Limiting Factor:

Flow
Habitat Diversity
Key Habitat Quantity
Obstructions
Sediment Load
Water Temperature

Watershed Lower John (1707020409)
**(HUC5): Day River-
Ferry Canyon**

Limiting Factor:

Flow
Habitat Diversity
Key Habitat Quantity
Obstructions
Sediment Load
Water Temperature

Watershed Lower John (1707020410)
**(HUC5): Day River-Scott
Canyon**

Limiting Factor:

Flow
Habitat Diversity
Key Habitat Quantity
Obstructions
Predation
Sediment Load
Water Temperature

Limiting Factors identified during Subbasin Planning by Watershed

Watershed Upper Rock (1707020411)
(HUC5): Creek

Limiting Factor:

Flow
Habitat Diversity
Key Habitat Quantity
Obstructions
Sediment Load
Water Temperature

Watershed Lower Rock (1707020412)
(HUC5): Creek

Limiting Factor:

Flow
Habitat Diversity
Key Habitat Quantity
Obstructions
Sediment Load
Water Temperature

Watershed Grass Valley (1707020413)
(HUC5): Canyon

Limiting Factor:

Flow
Key Habitat Quantity
Sediment Load

Watershed Lower John (1707020414)
**(HUC5): Day River-
McDonald Ferry**

Limiting Factor:

Flow
Habitat Diversity
Key Habitat Quantity
Predation
Sediment Load

Limiting Factors identified by Tribes during Remand by Watershed

HUC4: Lower John (17070204)
Day

Watershed Butte Creek (1707020406)
(HUC5):

Limiting Factor:

In-channel Characteristics
Water Quantity – Flow
Water Quality - Temperature
Riparian / Floodplain
Pools
Passage / Entrainment

Watershed Pine Hollow (1707020407)
(HUC5):

Limiting Factor:

In-channel Characteristics
Riparian / Floodplain
Watershed - Hydrology

Watershed Thirtymile (1707020408)
(HUC5): Creek

Limiting Factor:

Sediment
Water Quality - Temperature
Pools
Water Quantity – Flow
Riparian / Floodplain
Passage / Entrainment
